Table: ProductDocuments

Two JSON documents. Rice has weightKg while oil has volumeLitres. The flexible descriptions are the document-model example for Portfolio 4. ISJSON checks syntax, not whether a brand or positive weight is present. Create Products first.

Columns

Column	Meaning
ProductID	Primary key and foreign key; at most one document per product.
Details	JSON text; ISJSON checks that its format is valid.

Create, insert and display

```
USE GreenBasketDB;
GO

CREATE TABLE dbo.ProductDocuments
(
 ProductID INT NOT NULL PRIMARY KEY,
 Details NVARCHAR(MAX) NOT NULL,
 FOREIGN KEY (ProductID) REFERENCES dbo.Products(ProductID),
CHECK (ISJSON(Details) = 1)
);

INSERT INTO dbo.ProductDocuments (ProductID, Details)
VALUES
 (1, N'{"brand":"Farm Fresh","weightKg":25}'), (3,
N'{"brand":"Golden Oil","volumeLitres":5}');

SELECT * FROM dbo.ProductDocuments ORDER BY ProductID;
```

How to use this file

Run once after its parent tables exist. Run only the final SELECT again when you want to inspect the data. Re-running CREATE TABLE or the same INSERT values causes duplicate-object or duplicate-key errors; this is expected, not a reason to delete the database.
