Table: Orders

Three orders: Ada owns orders 1 and 3; Bayo owns order 2. Chidi has no orders. Create Customers first.

Columns

Column	Meaning
OrderID	Whole number; primary key.
CustomerID	Foreign key linking the order to an existing customer.
OrderDate	Date of the order; YYYYMMDD literals avoid date-format ambiguity.

Create, insert and display

```
USE GreenBasketDB;
GO

CREATE TABLE dbo.Orders
(
 OrderID INT NOT NULL PRIMARY KEY,
 CustomerID INT NOT NULL,
 OrderDate DATE NOT NULL,
 FOREIGN KEY (CustomerID)
        REFERENCES dbo.Customers(CustomerID)
);

INSERT INTO dbo.Orders (OrderID, CustomerID, OrderDate)
VALUES
 (1, 1, '20260901'),
 (2, 2, '20260902'),
 (3, 1, '20260903');

SELECT * FROM dbo.Orders ORDER BY OrderID;
```

How to use this file

Run once after its parent tables exist. Run only the final SELECT again when you want to inspect the data. Re-running CREATE TABLE or the same INSERT values causes duplicate-object or duplicate-key errors; this is expected, not a reason to delete the database.

The displayed rows are expected from the supplied sample data.
