Table: Customers

Three customers: Ada, Bayo and Chidi. The example.com addresses are fictional. Create this table before Orders.

Columns

Column	Meaning
CustomerID	Whole number; primary key. Enter it manually.
CustomerName	Text up to 100 characters; N supports Unicode text.
Email	Required text; UNIQUE prevents duplicate emails.

Create, insert and display

```
USE GreenBasketDB;
GO

CREATE TABLE dbo.Customers
(
 CustomerID INT NOT NULL PRIMARY KEY,
 CustomerName NVARCHAR(100) NOT NULL,
 Email VARCHAR(150) NOT NULL UNIQUE
);

INSERT INTO dbo.Customers
 (CustomerID, CustomerName, Email)
VALUES
 (1, N'Ada Okafor', 'ada@example.com'),
 (2, N'Bayo Ade', 'bayo@example.com'),
 (3, N'Chidi Obi', 'chidi@example.com');

SELECT * FROM dbo.Customers ORDER BY CustomerID;
```

How to use this file

Run once after its parent tables exist. Run only the final SELECT again when you want to inspect the data. Re-running CREATE TABLE or the same INSERT values causes duplicate-object or duplicate-key errors; this is expected, not a reason to delete the database.

The displayed rows are expected from the supplied sample data.
