Database: GreenBasketDB

Run this file first, once, in SSMS connected to a local SQL Server instance.

```
CREATE DATABASE GreenBasketDB;
GO
USE GreenBasketDB;
GO
```

Elementary explanation

CREATE DATABASE makes the database. USE selects it for the statements that follow. GO ends a batch in SSMS. If GreenBasketDB already exists, skip CREATE DATABASE and use the existing database only if it belongs to this exercise. No automatic deletion is included.

Check

```
SELECT DB_NAME() AS CurrentDatabase;
```

Expected value: GreenBasketDB. Save a screenshot after running it. The following PDFs create the tables inside this database.
