# Table: Products

Three products, with current stocks 20, 30 and 40. These are stock balances after the historical sample orders below; do not subtract the sample orders again.

## Columns

| Column | Meaning |
|---|---|
| ProductID | Whole number; primary key. |
| ProductName | Required product name. |
| Price | Current selling price in NGN; two decimal places; above zero. |
| StockQuantity | Current units available; zero is allowed, negatives are not. |

## Create, insert and display

```
USE GreenBasketDB;
GO

CREATE TABLE dbo.Products
(
 ProductID INT NOT NULL PRIMARY KEY,
 ProductName NVARCHAR(100) NOT NULL,
 Price DECIMAL(10,2) NOT NULL CHECK (Price > 0),
 StockQuantity INT NOT NULL CHECK (StockQuantity >= 0) );

INSERT INTO dbo.Products
 (ProductID, ProductName, Price, StockQuantity)
VALUES
 (1, N'Rice bag', 25000.00, 20),
 (2, N'Beans bag', 15000.00, 30),
 (3, N'Cooking oil', 8000.00, 40);

SELECT * FROM dbo.Products ORDER BY ProductID;
```

## How to use this file

Run once after its parent tables exist. Run only the final SELECT again when you want to inspect the data. Re-running CREATE TABLE or the same INSERT values causes duplicate-object or duplicate-key errors; this is expected, not a reason to delete the database.

The displayed rows are expected from the supplied sample data.
